

Porcelain to gold bonded crown **from £350.00**

A crown is required when a tooth is badly broken or heavily restored. The tooth is prepared and impressions taken. A precise model is then made on which a hand crafted crown is made specifically for your tooth. Porcelain to gold bonded crowns combine the aesthetics of porcelain and the strength of gold. They are great for back teeth.

Procera Crowns **from £385.00**

This new technology allows us to bond porcelain to a strengthened glass core and so eliminates the need for gold inside the crown. This makes the crown very strong but incredibly natural in its appearance. These are ideal for front teeth where cosmetics are important.

Porcelain Veneers **from £350.00**

Broken, misshapen and discoloured teeth can be made to look great again by a dental veneer. Your tooth is carefully prepared and then a porcelain veneer is hand crafted to fit your tooth precisely. It is then bonded to your tooth to make it look great again.

Porcelain to gold bonded bridges per unit **from £365.00**

Gaps can be filled using bridges. The teeth either side of the gap are prepared and then the bridge is carefully constructed in the laboratory to fit your teeth. At a second visit the bridge is cemented permanently to your teeth.

Dental Implants **from £1700.00**

Missing teeth can be replaced by using dental implants. A titanium implant is placed under the gum. The bone then integrates into the implant and so it becomes fixed. A restoration is then placed on top to give you back your smile and allow you to chew and eat with confidence.

Full Dentures **from £550.00**

Having no teeth need not mean having no smile. Dentures using modern, natural looking teeth that are hard wearing can be crafted to give you a beautiful smile.

Root Canal Therapy **from £230.00**

Teeth no longer need to be extracted. Root canal therapy allows us to clean the infected tooth chambers and then thoroughly disinfect and seal them. The tooth will then heal and you will have saved your tooth and your smile.

Occlusal disease Headaches and Migranes

Laboratory Made Hard Acrylic Splint **from £380.00**

Headaches and migraines may well be a symptom of Occlusal Disease. An occlusal splint is accurately constructed. It is then precisely adjusted over several visits to provide you with a perfect bite. This allows the muscles that move your jaw to relax so helping you relieve the pressures of constant headaches and migraines and stop you damaging your teeth at the same time.

NTI Splints **from £150.00**

Soft Night Guards **from £35.00**

Occlusal Equilibration **from £350.00**

Occlusal equilibration is the careful remodelling of the tops of your teeth to achieve a better bite. This may be indicated if you are having a large number of teeth crowned or if you suffer from multiple tooth fractures, headaches or migraines.

All prices are current at 1st July 2004 and are subject to increase and variation

Examination Procedures

Routine Oral Health Consultation

from £33.00

Each time you visit the practice we will re evaluate your dental health. We will reassess and record the health of your joints, teeth, gums and as ever, do an oral cancer screening. You will have an opportunity to discuss your treatment needs and decide what treatment would be best for you.

Initial “New Patient” Consultation

from £60.00

The initial “new patient” consultation includes a detailed assessment of your mouth and surrounding areas. The consultation will also involve a screening for oral cancer. Your teeth, gums and soft tissues are closely examined and recorded. Your gum condition will be assessed as this is the foundation upon which every thing else is based - good gums mean a healthy mouth! We will also undertake a screening of your temporo mandibular joints and muscles - this could be really important if you suffer from headaches and migraines or if you are beginning to wear your teeth down through grinding. We will discuss with you how you view your smile and how important this is to you. Finally, we will give you a report and help you decide what treatments would be best suited to keep you healthy.

Small Intra Oral X-ray

from £6.90

These radiographs can be extremely important in helping us diagnose dental disease early making its treatment simpler.

Panoramic “Whole Mouth” X-ray

from £30.00

This radiograph allows all the bone structures around your teeth and their roots to be examined.

Initial Implant Assessment

from £65.00

Study Models and Occlusal Analysis

from £230.00

For complex work involving bridges, crowns or implants it is essential we assess fully the way you bite and grind together. Impressions of your teeth are taken to create models. The position and movement of your jaws are recorded and then the models are mounted on a Denar articulator that accurately mimics the way you bite and grind. Your teeth are then examined on the models tooth by tooth to see what effects the complex treatment may have on your biting pattern. This helps us to only alter your bite in order to improve it and make it more stable.

Hygienist Care

Hygienist Maintenance Therapy

from £33.00

Your gums and the bone support underneath them are the foundations on which your smile is based. Regular care from our team of hygienists will help you maintain the health of these important structures. The treatment will include a recorded assessment of your gum health including measuring your bleeding score as well as thorough scaling and polishing of your teeth. In addition, the hygienist will review your home care regimen to ensure you are cleaning your teeth in the most efficient manner. The end result will also help you to have a healthy bright smile as well!

Fresher Breath Review

from £38.00

Our team of hygienists can help you combat bad breath. A thorough cleaning and review of your home care techniques and advice on diet can help you have a fresh mouth.

Hygienist Specialized Gum Therapy

from £110.00

If your dentist feels that your gums need a little extra help you may be asked to see the hygienist over two visits. The hygienist will be able to give this extra help and to monitor if the gums are returning to full health.

Hygienist Full Gum Therapy

from £410.00

Severe gum disease affects the bone support of the teeth and is called periodontal disease. If you are suffering from this you may well need this treatment. The gum condition around each tooth is recorded in 6 different places and then the hygienist will begin a course of treatment over 6 or more appointments where the teeth are deep cleaned under local anaesthetic as required to ensure it is comfortable for you. The hygienist and the dentist will then reassess and monitor your gum condition to help you return to health.

Cosmetic and Preventative Care

Tooth Whitening

from £170.00

Teeth darken with age. You can rejuvenate your smile easily with tooth whitening. This is at home and takes between 7-14 nights. Trays are made to fit snugly over your teeth and then a gentle whitening gel is placed in the trays next to your teeth. A brighter, whiter smile results!

Sports Mouth Guards

from £35.00

If you play a contact sport you can prevent dental damage by wearing a custom made sports guard. It is important that a mouth guard fits your teeth and gum accurately to give you the best protection. This type of accuracy can only be obtained from a correctly made mouth guard.

Fissure Sealants

from £15.00

You can help prevent dental decay by having your teeth fissure sealed. A plastic coating is bonded to the surface of the teeth to prevent decay starting.

Restorative Procedures

Bonded Amalgam Silver Restoration

from £65.00

When your tooth needs filling, a bonded amalgam filling is a good option in the back teeth. New techniques have enabled us to bond the fillings into the teeth. This makes the filling and the tooth much stronger than a conventional filling, it also cuts down on post operative sensitivity.

Tooth Coloured Restoration

from £85.00

If you can see your filling and want it to look like a real tooth, then coloured fillings are for you. We sometimes will use a rubber dam to separate the teeth from the rest of the mouth. This makes sure that the filling bonds properly to the tooth without any saliva contaminating it. This makes the filling last longer.

Porcelain Inlays

from £275.00

Large cavities can also be filled with tooth coloured restorations. Porcelain or composite inlays made in the laboratory are much stronger than conventional tooth coloured restorations. They also can be made to look almost invisible!

Gold Inlays

from £275.00

Gold inlays really are the gold standard by which all other restorations are judged. They are strong and long lasting and if the cosmetics are not so important these are possibly the best restoration for your tooth.
